Computer Systems and Networking

Have you ever thought about who connects the world, who keeps your information safe, or who keeps our computerized businesses running? The Computer Systems and Networking (CSN) program at the College of the North Atlantic trains individuals to enter the exciting field of information technology support.

Our two-year, diploma program combines classroom training and real-world experience with industry to provide the technical and professional skills required by the fast-paced IT field.

From a smartphone to a network datacenter, the CSN program provides the skills to install, troubleshoot, secure, and maintain the entire IT fabric including leading edge concepts such as Cloud Computing, the Internet of Things, and Cyber-Security.

Topics in the program include Server Administration, Network Infrastructure, Security, Workplace Professionalism, Hardware Installation and Troubleshooting, Operating System Support, and Communication Skills.

College of the North Atlantic is the only authorized Cisco Networking Academy in the Province and uses genuine Cisco equipment and materials to deliver an internationally-recognized networking curriculum.
